

## Flood/Water Damage Restoration

After the water from heavy rains, roof leaks, or appliance failure recedes, you might feel overwhelmed by the damage left to your property. Timely mitigation is the key to minimizing your loss after water damage. The longer water stands the better the chance of mold becoming an issue. The idea is to prevent mold and restore the property as quickly as possible while making sure all wet areas are properly extracted and that the structure is properly dried before any restoration begins.

**Secure Restoration Systems** works on your behalf with your insurance adjuster as a restoration expert, not just as a General Contractor, utilizing the same claim adjusting software used by insurance representatives nationwide.
